From e-Cigarettes to Hookahs: Current Trends in Tobacco & Smoking

Carol Jahn, RDH, MS is the Director of Professional Relations & Education for Water Pik, Inc. She has presented more than 350 courses, published more than 85 papers, and contributed to 7 textbooks, including *Clinical Periodontology* (9th, 10th, 11th eds). She has been a presenter at 40 state/national dental hygiene association meetings, including ADHA and RDH UOR. She has presented at 20 state/regional dental meetings including Chicago Midwinter and Yankee Dental. She was a 2013 recipient of the ADHA Award of Excellence.

OVERVIEW

Updating dental patient medical histories shows a decrease in cigarette smoking, while the use of other tobacco products is on the rise. Today, more high school students use e-cigarettes than smoke regular cigarettes. Many partake in multiple forms of tobacco including hookahs and smokeless. Flavored products add to the appeal. This course will examine the changing trends in tobacco use and how they impact oral and systemic health.

FEATURED LECTURE

Presented by: Mr TERRY ROYCROFT

Cannabis 101

1.5 CE Hours

In 2010, Mr Terry Roycroft founded MCRCI, a private organization with licensed physicians that educate and sign in support of qualified patients looking for legal access and guidance for medicinal cannabis. MCRCI soon became the leading cannabis clinic in Canada with a team of doctors who specialize in prescribing cannabis.

With his knowledge and experience in the medicinal cannabis industry, Mr Roycroft soon became one of the top consultants in the country for the Marijuana for Medical Purposes Regulations (MMPR) and the former Marijuana Medical Access Regulations (MMAR). Mr Roycroft continues to expand his network and database within the industry, locally and internationally, by working with production sites, pharmacists, medical laboratories, doctors, and patients.

OVERVIEW

During this informative lecture, Mr Roycroft will touch on the following:

- Cannabis in Canada: A brief history
- Forms of Cannabis
- Delivery Methods
- Medicinal Use of Cannabis
- Oral Health Concerns Related to Cannabis & Case Study
- Accessing Medicinal Cannabis

Cosmetic Dentistry for the Everyday Dentist

COLTENE

AND

The Value of Conserving and Preserving from the Inside Out: A Minimal Intervention Approach to Restoring Teeth.

Sinclair
Dental / Dentaire™

Dr Albrecht attended the Ohio State University College of Dentistry. He comes from a family of General Dentists. Currently, he is in private practice in Mentor, Ohio, with his Dad and Sister.

Dr Albrecht has an innovative mind and is constantly seeking ways to improve dentistry for the dentist and the patient. He is a member of the Ohio Dental Association, American Dental Association, American Academy of Oral Medicine, Northeastern Ohio Dental Society and Lake County Dental Study Club. He is an Advisory Board Member for Erie Bank as well as a published author of two children's books.

OVERVIEW

This dynamic educational lecture/workshop focuses on the practical application of minimally invasive restorations in your dental practice. Attendees will learn how to use new materials and technologies to preserve tooth structure and provide affordable, life enhancing treatments for their patients.

During this fast-paced course, attendees will learn about biomechanical function and preservation of tooth structure during bulk filling, bonding and composite restoration procedures. Minimally invasive concepts and methods are explored using a combination of lecture and hands-on exercises in three modules.

Module 1: Dentin substitution using a biomimetic bulk-fill composite material (tooth #16, MOD-LI, class II)

Module 2: Placement of a pre-fabricated direct composite veneer (Componeer)

Module 3: Freehand restoration using a next-generation universal submicron composite (anterior class IV, tooth #21), matching veneer placed in Module 2

LEARNING OBJECTIVES

- Learn what minimally invasive restoration is and how it benefits your patient.
- Recognize the principles of architecturally designed composites for bulk fill indications, direct restorations, and pre-fabricated direct restorations.
- Understand why restoring teeth from the inside out is the future of dentistry.

Space is LIMITED to 20 Dentists for the Hands-On Workshop.

Register early to avoid disappointment.

FEATURED LECTURE & WORKSHOP

Presented by: Ms PENNY HATZIMANOLAKIS

Successful Peri-Implant Support for the Dental Hygienist

3 CE Hours - Lecture
3 CE Hours - Workshop

Penny Hatzimanolakis received her education at UBC, completing both a Bachelor (2004) and Masters degree (2009) in Dental Science. In 1994, she obtained her diploma from Vancouver Community College in Dental Hygiene.

As a UBC educator, she is involved with the graduate (Perio), undergraduate Dental (DMD) and Dental Hygiene Degree (DHDP) Programs.

As a researcher, Penny focuses on periodontal disease, the use of photodynamic/photodysinfection therapy, implants and oral self-promotions. She has published and co-authored in multiple journals and has composed and presented webinars internationally.

As a clinician, she has practiced with a periodontal/prosthetic specialty team for the last 18 years. Penny is British Columbia's Dental Hygienist Representative on the PDC Organizing Committee, speaks at several study clubs and conferences, and has created a consulting company, UpScale Consulting, to assist Dental Hygienists and their teams to achieve the highest standard of care.

OVERVIEW

Technology has allowed dental implants to be more accessible to patients, which has the ability to improve their oral health. As primary health care providers, Hygienists play a pivotal role in maintaining implants. Having fundamental knowledge of implant components, mechanism and debridement materials are central for achieving comprehensive care. This lecture is intended for Hygienists and will focus on the assessment; diagnosis, planning, implementation and evaluation of implant components, instrumentation and overall impact on oral health.

LEARNING OBJECTIVES:

Assessment: Describe Peri-implant disease. What clinical parameters are relevant for assessing implants? Learn the criteria for producing a diagnostic radiograph. Discuss the evidence to probe or not to probe the peri-implants? Identify crucial components of the implant composition and mechanism.
Diagnosis: Learn how to identify healthy, failing, ailing and failed implants.
Planning: Learn to treatment plan for the healthy and diseased peri-implant.
Implementation: Describe the various materials used to debride healthy and diseased peri-implants. Identify the concepts needed to effectively and safely debride around implants.
Evaluation: Describe the complications, referral and recall intervals for the healthy and diseased peri-implants.

During the morning lecture, participants will learn the components, fundamentals and principles of the implants.

Space is limited to 20 Hygienists for the HANDS-ON workshop.

Register early to avoid disappointment.

Presented by: Dr PATTI-ANNE JONES & Dr TIM GOULD

Clear on Codes

3 CE Hours

Dr Tim Gould

Prior to joining the BCDA, Dr Gould practiced in solo and large group practice environments, both as a general practitioner and as a periodontist. In addition, Tim has held the position of Associate Professor both full-time and part-time at the Faculty of Dentistry, University of British Columbia.

Dr. Patti-Anne Jones

Dr Jones received her DDS from the University of Western Ontario and MBA from Richard Ivey School of Business. She brings more than 20 years of clinical practice, as well as industry experience in marketing and business development to the BCDA. Dr. Jones also continues to practice as a GP dentist.

OVERVIEW

Insurance audits have become a key concern for Dentists in BC. This course focuses on the insurance audit process, and steps Dentists can take to protect themselves from being a target for audit. Aggressive billing trends and frequently misused codes are identified with emphasis on how to bill appropriately using the BCDA Suggested Fee Guide.

LEARNING OBJECTIVES:

1. How a dentist (Associate or Principal) may be targeted for an insurance investigation/audit
2. Targeted fee codes; appropriate use of the fee guide; and risks of aggressive billing
3. Ways to protect yourself from an audit
4. Essential record-keeping tips
5. Review of the audit process and how BCDA can help

Psychiatric Illness and Dentistry: Challenges for Oral Care

Dr David Clark

Dr Clark obtained his MSc in Oral Pathology at the University of Western Ontario in 1986 and is a Fellow of the Royal College of Dentists of Canada. His hospital based practice has been devoted primarily to the general dental care of individuals undergoing primary care for various forms of psychiatric illness. He instructs at the University of Toronto, Durham College (Dental Hygiene Program) and at George Brown University.

OVERVIEW

Psychiatric illnesses and their medical management carry significant risks for oral disease. Although common, diseases such as schizophrenia, major depression, bipolar disorder and eating disorders often remain unrecognized or misunderstood. Dental professionals should be aware of factors such as the reduced rates of compliance with dental treatment, the effects of psychotropic medications on oral health, including xerostomia, caries and periodontal disease. It is important for the dental health practitioner to demonstrate patience, flexibility, empathy and a non-stigmatizing attitude in caring for these individuals. Enhancing self-esteem and feelings of self-worth for those coping with a psychiatric illness can be a very fulfilling experience that will only serve to continue to break down the stigma surrounding this group of diseases.
